                                                                                                                                                                                                                                                                                                                                                                                      Biol.
               PUNCTION: The biological conversion of cellulose to glucose generally requires three types of hydrolytic enzymes: (1) Endoglucanases which cut internal beta-1,4-glucosidic bonds; Exocellobiohydrolases that cut the dissaccharide cellobiose from the nonreducing end of the cellulose polymer chain; (3) Beta-1,4-glucosidases which hydrolyze the cellobiose and oth short cello-oligosaccharides to glucose CARTAITIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and gereal beta-D-glucosis.

```

site for proteolysis.
SIMILARITY: Belongs to cellulase family B (family 6 of glycoshydrolases).
SIMILARITY: Contains 1 bacterial-type cellulose-binding (CBD)

glycosyl

domain.

COFACTOR: Binds 2 magnesium ions per subunit (By similarity). ENZYME REGULATION: Activated by calcium/calmodulin and G protein. SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Mushroom bodies of the fly brain.
DOMAIN: Composed of two homologous domains.
SIMILARITY: Belongs to the adenylyl cyclase class-4/guanylyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GO:0019933; P:CAMP-mediated signaling; NAS GO:0007625; P:grooming behavior; NAS.
